CONSIDERATIONS WHEN CHOOSING AN ADAPTED STROLLER

An adapted stroller is a type of stroller designed for individuals with mobility and positioning needs. They are lightweight, compact, and fold up, making them a more transportable alternative to wheelchairs. Adapted strollers come in many types of 3 and 4 wheel models for positioning, jogging, tilting, and transit. As with wheelchairs, the model, accessories, and size needed are usually determined during a seating evaluation with a physical therapist. During this evaluation, the consumer has an opportunity to try different models and components that best meet their needs.

ADAPTED STROLLER QUESTIONS

1. Is the intended user a child or adult?
    - ☐ Child
    - ☐ Adult

2. Do you currently use an adapted stroller?
